**Use:**

- Prior to commencement of work, Each bag should be visually inspected for defects that could hinder performance, for a detailed explanation of this process, please refer to the section: “Periodic Visual Inspection and Care”.
- It is recommended that only approved items be stored in each bag to ensure longevity and prevent premature defects from occurring

**Periodic Visual Inspection and Care:**

- It is recommended that where it is possible or practical to do so, all Mat and Cover Bags be periodically inspected, cleaned and then re-inspected. This periodic inspection is recommended to take place every 6 months and should be an adjunct not a replacement for the routine (prior to use) inspection.

To aid visual inspection:

- The contents of each bag removed and placed nearby
- Each component should be cleaned separately using the recommended cleaning procedure
- Clean the glove bag with soapy water and a soft bristle brush

Defects may take the form of embedded objects, fraying, rust, cuts, tears or any other form of aging or damage.

**Zippers:**

- It is especially important that zippers are cleaned regularly to ensure they remain free from debris and/or rust. Failing to clean the zippers regularly can lead to accelerated rusting and damage to the zipper teeth.
- While the zipper teeth are made from non-conductive materials, this should not be relied upon. Caution that the zipper slider is conductive.

**Velcro:**

- It is especially important that Velcro is cleaned regularly to ensure a proper connection.
